

Rishit Dhote

Backend & Distributed Systems Engineer

rishitrdhote@gmail.com · +91 7021796024 · Remote / India · github.com/Ripperox · linkedin.com/in/rishit-dhote · rishitdhote.vercel.app

Backend & distributed-systems engineer who builds high-concurrency, realtime systems that stay fast under load. Shipped a Rust WebSocket platform sustaining 1000+ concurrent users per replica and drove init-payload delivery from 89% to 99% at 1k concurrent users through K6-guided load testing and refactoring. Comfortable across Rust, TypeScript, and Python — from streaming data pipelines to the UIs on top of them.

EXPERIENCE

Software Developer, Apeing Labs Nov 2025 – Present · Remote

- Shipped a cross-platform prediction-market module integrating Polymarket & Kalshi via dFlow APIs and custom middleware — aggregating liquidity and syncing multi-chain odds in real time.
- Ran Grafana K6 load/stress tests simulating concurrent users to surface throughput bottlenecks; results drove a refactor raising init-payload delivery from **89% → 99% at 1,000 concurrent users/replica**.
- Owned the test suite — unit, integration, and Playwright E2E across critical flows (room join, trading terminal, live chat/polls) — catching regressions before release.

Blockchain Developer, Caerulean Bytechains Apr 2025 – Nov 2025 · Hyderabad

- Built core backend for a SaaS platform letting Web2 developers compose blockchains through a drag-and-drop, plug-and-play feature builder — abstracting Substrate/Polkadot complexity into reusable modules.
- Designed and implemented custom consensus mechanisms in Rust/Substrate for scalable, interoperable chain infrastructure.

Data Engineer Intern, National Stock Exchange Jan 2025 – Mar 2025 · Mumbai

- Migrated large-scale order data from Greenplum to Cloudera and ran EDA on billions of order records to surface trading trends.

AI Engineer Intern — LLMs, Smartavya Analytica Jun 2024 – Jul 2024 · Pune

- Developed a locally-deployed, open-source AI solution for the National Stock Exchange (NSE) to ensure data privacy while enabling natural-language database queries.

SELECTED PROJECTS

Alpharooms — realtime SocialFi platform. Architected a high-concurrency Rust/Tokio WebSocket service with shared Redis pub/sub fanout and PgBouncer pooling, sustaining **1000+ concurrent users/replica**; 30+ event types over one socket; SQLx + Postgres persistence; Yellowstone gRPC ingest from Solana with Rust parsers and sub-second price fanout.

Rust · Tokio · WebSockets · Redis · PostgreSQL · gRPC · Next.js

LLM Gateway — transparent Anthropic-compatible streaming proxy (Rust/Axum) that relays SSE byte-for-byte while instrumenting every token (TTFT, latency, throughput) live to a React dashboard over WebSockets. github.com/Ripperox/llm-gateway

FlavourScout — provably-optimal cart & coupon optimizer using a multiple-choice knapsack DP priced against the real checkout bill; 500-test suite; live demo. *Python · FastAPI*

Solana Transaction Monitor — realtime on-chain dashboard; WebSocket → SSE fanout, virtualized 1,000-transaction feed, automatic reconnect. *Next.js · TypeScript*

SKILLS

Languages	Rust, TypeScript, Python, Solidity, SQL	Backend	Tokio, WebSockets, gRPC, Redis, PostgreSQL, AWS
Frontend	React, Next.js	Testing / Ops	K6, Playwright, Grafana

EDUCATION

B.Tech, Computer Science (Blockchain Specialization), VIT Vellore 2021 – 2025 · GPA 8.11 / 10
